a guide for statistical tests and interpretations with spss is designed for students taking basic and advanced courses in statistics taking an integrative and practical approach to learning statistics it guides students through navigating spss outputs and writing quantitatively dealing with technical and substantive interpretations without resorting to complex mathematical formulae starting from the basics of quantitative research methods and discussing descriptive and inferential statistical tests this book provides a unique perspective of data analysis with spss it makes a conscious effort to explore the various statistical methods one can use to dissect a data set using basic or advanced statistical

techniques to achieve the best outcome it covers the practical questions that arise while doing an assignment final paper or thesis showing students how to proceed to the next step in their interpretation and analysis it will provide quantitative methodology or data analysis students with core interpretations of spss outputs for key statistical tests it will also demonstrate how to select and report the key trends and patterns of the data using descriptive and inferential statistics the requirements and or assumptions of each test as well as the precise language to use for reporting on each test with spss screenshots and step by step advice this book will be useful for all undergraduate and graduate students in the social sciences and humanities as a supplemental textbook to provide practical guidance on moving through all steps of statistical testing and analysis

is the topic analog testing and diagnosis timely yes indeed it is testing and diagnosis is an important topic and fulfills a vital need for the electronic industry the testing and diagnosis of digital electronic circuits has been successfully developed to the point that it can be automated unfortu nately its development for analog electronic circuits is still in its stone age the engineer s intuition is still the most powerful tool used in the industry there are two reasons for this one is that there has been no pressing need from the industry analog circuits are usually small in size sometimes the engineer s experience and intuition are sufficient to fulfill the need the other reason is that there are no breakthrough results from academic re search to provide the industry with critical ideas to develop tools this is not because of a lack of effort both academic and industrial research groups have made major efforts to look into this problem unfortunately the prob lem for analog circuits is fundamentally different from and much more diffi cult than its counterpart for digital circuits these

efforts have led to some important findings but are still not at the point of being practically useful however these situations are now changing the current trend for the design of vlsi chips is to use analog digital hybrid circuits instead of digital circuits from the past therefore even ix x preface though the analog circuit may be small the total circuit under testing is large

the panel on statistical methods for testing and evaluating defense systems had a broad mandate to examine the use of statistics in conjunction with defense testing this involved examining methods for software testing reliability test planning and estimation validation of modeling and simulation and use of modem techniques for experimental design given the breadth of these areas including the great variety of applications and special issues that arise making a contribution in each of these areas required that the panel s work and recommendations be at a relatively general level however a variety of more specific research issues were either brought to the panel s attention by members of the test and acquisition community e g what was referred to as dubin s challenge addressed in the panel s interim report or were identified by members of the panel in many of these cases the panel thought that a more in depth analysis or a more detailed application of suggestions or recommendations made by the panel would either be useful as input to its deliberations or could be used to help communicate more individual views of members of the panel to the defense test community this resulted in several research efforts given various criteria especially immediate relevance to the test and acquisition community the panel has decided to make available three technical or background papers each authored by

a panel member jointly with a colleague these papers are individual contributions and are not a consensus product of the panel however the panel has drawn from these papers in preparation of its final report statistics testing and defense acquisition the panel has found each of these papers to be extremely useful and they are strongly recommended to readers of the panel s final report
