this book presents contemporary stem education research conducted by mathematics education researchers and their collaborators which highlights the important and pivotal role of mathematics in school stem education it showcases evidence of the types of integrated curriculum approaches to stem education which highlight mathematics as a key component and where mathematical concepts can be learnt through integrated tasks these examples challenge the idea that mathematics is just an application or servant to the other stem subjects and highlight the contribution that mathematics can make to the understanding and practices of the other stem subjects this book fills a void in the current research literature on the role of mathematics in stem education provides evidence of the possibilities for designing integrated stem curriculum and highlights current understandings of the role of mathematics in school stem education for researchers it identifies and elaborates gaps to encourage further exploration in this field

this comprehensive nursing text has been fully and extensively updated for this third edition and offers students a complete guide to the art and science of mental health nursing the book combines theory and practice to look in depth at different types of mental health problems different therapeutic interventions the practical tools of nursing such as risk assessment problem solving key themes such as ethics law and professional issues

between 1989 and 1992 three colloquia on transformation problems were held at the ludwig reimers stiftung bad homburg at the end of the 1980s the collapse of the soviet type socialist economic system had become clear and hence the necessity to transform these systems into an entirely different economic order similar processes have happened and still happen in other historical constellations for instance in developing countries it has been the aim of the transformation colloquium to gain more theoretical insight into these phenomena the object of research has been transformation defined as transition from a given economic order socialist planned economy e.g. to a consistent new or different market economy this is a highly complex phenomenon which occurred above all during the 20th century introduction and abolition of socialist systems transition from war economies to peace time market economies historical experience allows perhaps for certain generalizing abstractions the central problem discussed at all up to now three colloquia is the question whether the object is amenable for theoretical analysis and which approaches eventually are promising

communication is vital for social participation however communication often takes place under suboptimal conditions this makes communication harder and less reliable leading at worst to social isolation in order to promote participation it is necessary to understand the mechanisms underlying communication in different situations human communication is often speech based either oral or written but may also involve gesture either accompanying speech or in the form of sign language for communication to be achieved a signal generated by one person has to be perceived by another person attended to comprehended and responded to this process may be hindered by adverse conditions including factors that may be internal to the sender e.g. incomplete or idiosyncratic language production occur during transmission e.g. background noise or signal processing or be internal to the receiver e.g. poor grasp of the language or sensory impairment the extent to which these factors interact to generate adverse conditions may differ across the lifespan recent work has shown that successful speech communication under adverse conditions is associated with good cognitive capacity including efficient working memory and executive abilities such as updating and inhibition further

frontoparietal networks associated with working memory and executive function have been shown to be activated to a greater degree when it is harder to achieve speech comprehension to date less work has focused on sign language communication under adverse conditions or the role of gestures accompanying speech communication under adverse conditions it has been proposed that the role of working memory in communication under such conditions is to keep fragments of an incomplete signal in mind updating them as appropriate and inhibiting irrelevant information until an adequate match can be achieved with lexical and semantic representations held in long term memory recent models of working memory highlight an episodic buffer whose role is the multimodal integration of information from the senses and long term memory it is likely that the episodic buffer plays a key role in communication under adverse conditions the aim of this research topic is to draw together multiple perspectives on communication under adverse conditions including empirical and theoretical approaches this will facilitate a scientific exchange among individual scientists and groups studying different aspects of communication under adverse conditions and or the role of cognition in communication as such this topic belongs firmly within the field of cognitive hearing science exchange of ideas among scientists with different perspectives on these issues will allow researchers to identify and highlight the way in which different internal and external factors interact to make communication in different modalities more or less successful across the lifespan such exchange is the forerunner of broader dissemination of results which ultimately may make it possible to take measures to reduce adverse conditions thus facilitating communication such measures might be implemented in relation to the built environment the design of hearing aids and public awareness

the graphical user interface gui as the most prevailing type of user interface ui in today s interactive applications restricts the interaction with a computer to the visual modality and is therefore not suited for some users e g with limited literacy or typing skills in some circumstances e g while moving around with their hands or eyes busy or when the environment is constrained e g the keyboard and the mouse are not available in order to go beyond the gui constraints the multimodal mm uis appear as paradigm that provide users with great expressive power naturalness and flexibility in this thesis we argue that developing mm uis combining graphical and vocal modalities is an activity that could benefit from the application of a methodology which is composed of a set of models a method manipulating these models and the tools implementing the method therefore we define a design space based method that is supported by model to model colored transformations in order to obtain mm uis of information systems the design space is composed of explicitly defined design options that clarify the development process in a structured way in order to require less design effort the feasibility of the methodology is demonstrated through three case studies with different levels of complexity and coverage in addition an empirical study is conducted with end users in order to measure the relative usability level provided by different design decisions
